Faculty of Engineering,
Dayalbagh Educational Institute,

Aakash Baranwal is pursuing his Electrical Engineering from Faculty of Engineering, Dayalbagh Educational Institute.

Apart from Computer Programming and hacking his interests lies in playing chess, soccer, learning about cosmology, star-gazing, sketching as well as singing and dramatics. At times he love playing snooker and table tennis too. Quite recently one of his paper on "Music Moves Brain To Pay Attention", got selected in Towards Science Of Consciousness, Tucson, U.S.A.(2018).

Recently he was offered to be a member of the editorial-board of two research journals which he has now joined.

He has made small projects like Obstacle Detector Car, Line Follower Car, Maze Follower Car, A circuit having a 40 pin Microcontroller which can be programmed and its program can be verified whether it's correct or not, A Car which can move in any terrain, A Car with a Robotic Arm, Mobile Controlled Rover having a bunch of good applications useful for both military as well as the for the disaster management teams. These days he is working on a new project called Clickers. He deeply wish to become a Scientist and some of the fields he intends to work on are Machine and Deep Learning, Web and App Development and Robotics and come out with something which is a boon to mankind.
